WHAT HAPPENS WHEN YOU ASK CHATGPT TO MAKE YOUR WI-FI 10 TIMES FASTER

BOTH PROMPTS FROM MY VIDEO

What happens when you ask ChatGPT to make your Wi-Fi 10 times faster? I tried this and my speed literally doubled in less than 10 minutes. ChatGPT finds your router on your network, runs a speed test, finds every device and app eating up your internet and even checks if your neighbors' Wi-Fi is crowding yours. Then it fixes everything you say yes to. And the trick: it checks if you're actually getting the speed you pay for, and if you're getting screwed, it writes the email to your internet company for you.

Both prompts from my video, word for word

A speed test, the devices and apps eating your internet and your neighbors' Wi-Fi

Every fix it finds, made only when you say yes

Check you're getting the speed you pay for

The email to your internet company if you're not

November 2026

Start Here: What You Need

THE PLAN

1. On your computer, open the ChatGPT app and switch from Chat to Work.
2. Send the first prompt, type in your router password and say yes to the fixes.
3. In the same chat, check your plan and send the email it writes.

Before you start

Your computer: The ChatGPT desktop app on a Mac or Windows laptop, connected to your home Wi-Fi.

Your account: Work. Plus and Pro get it everywhere; Free and Go get limited Work in the desktop app.

Your router: The admin password from the sticker on the back or bottom.

Your network: Your own Wi-Fi, at home. Never a hotel, Airbnb, office or neighbor's network.

Do this on your computer, not your phone. ChatGPT has to be on your Wi-Fi to test it and reach your router. Work in the desktop app runs right on your computer. Work on the web or your phone runs in the cloud, where it can't see your home network.

What	Details
A computer on your Wi-Fi	A Mac or Windows laptop, connected by Wi-Fi (not a cable), where you usually use the internet
The ChatGPT desktop app	Free at chatgpt.com/download. If your app is called ChatGPT Classic, get the new one there
Work	Plus or Pro for the full thing. Free and Go get limited Work in the desktop app
Your router password	The admin or router password on its sticker. It's not always the same as the Wi-Fi password
Your plan's speed	What you pay for, like 500 Mbps. It's on your internet bill, or ChatGPT finds it in your email (Step 3)

Does your router have a login page?

Your router	What ChatGPT can do
AT&T or Verizon Fios gateways, older Xfinity gateways, most store-bought routers (Netgear, TP-Link, Asus)	Everything: log in, test, find what's slowing you down and change the settings
eero, Google Nest Wifi, TP-Link Deco, most Spectrum routers, T-Mobile and Starlink	The tests and fixes on your computer. For router changes, it tells you exactly what to tap in your router's app
Newer Xfinity gateways	Turn on the admin tool in the Xfinity app first, then everything works

Copy This First: The Prompts From My Video

Want it all at once? Switch to **Work** on your computer first (Step 1), then paste this and it runs every step from the video for you, one after the other:

ALL PROMPTS | COPY & PASTE

```
Do these in order and show each one under its own short heading:
1) Connect to my router and find everything that's slowing my Wi-Fi down.
2) Show me every fix you found, then make the ones I say yes to and run the speed test again.
3) Now check if I'm actually getting the speed I'm paying for.
Before you change anything, back up my router settings and ask me first. When you need my router password, open the router's login page and let me type it in myself.
```

Or go one at a time, like in the video. Start with this:

PROMPT 1 | COPY & PASTE

```
Connect to my router and find everything that's slowing my Wi-Fi down.
```

The second prompt from the video, the trick, is in Step 3. Send it in the same chat.

Step 1: Switch to Work on Your Computer

- **Check your Wi-Fi.** Make sure your computer is connected to your home Wi-Fi, not a cable, a hotspot or a VPN.
- **Open the ChatGPT desktop app.** At the top, switch from **Chat** to **Work**.
- **Keep it on your computer.** If the app asks where to run the task, choose **Local** (your computer), not **Cloud**. The cloud can't reach your router.
- **Send the first prompt.**

Approve as you go

ChatGPT asks before it runs anything on your computer, uses your network or changes a setting. Read each one and allow what makes sense. You can stop it at any time.

When it finds your router, it opens the router's login page and asks for the password. **Type the password from the sticker into the router's page yourself.** Never paste it into the chat.

> **TIP**
>
> On a Mac, if a pop-up asks whether ChatGPT can find devices on your local network, click **Allow**. Clicked Don't Allow? Open **System Settings > Privacy & Security > Local Network**, turn on **ChatGPT**, then quit and reopen the app.

Step 2: Say Yes to the Fixes

Here's what ChatGPT checks:

- **A speed test**, compared with the speed you pay for
- **Every device and app eating your internet**, like photo backups, game downloads and file syncing
- **Your neighbors' Wi-Fi**, and whether it's crowding the same channel as yours
- **Your signal**, and whether you're on the slower 2.4 GHz band or the faster 5 GHz one
- **Your router's settings**, like the channel, the bands and its software

Then it lists every fix it found. Mine found 11. All I did was say yes:

PROMPT 2 | COPY & PASTE

```
Yes, make those fixes and run the speed test again.
```

ChatGPT backs up your router settings, makes the changes, runs the speed test again and shows you before and after. Mine literally doubled.

> **TIP**
>
> The biggest jumps come from moving to the 5 GHz band, a less crowded channel and stopping background uploads. Your Wi-Fi can't go past the speed your internet plan gives you. If your test already matches your plan, the fix is the next step.

Step 3: The Trick: Check Your Plan

Stay in the same chat and send:

PROMPT 3 | COPY & PASTE

```
Now check if I'm actually getting the speed I'm paying for.
```

ChatGPT checks what internet plan you're on and compares it with your speed tests.

- **Let it find your plan.** Connect Gmail first and it reads your internet bill for you: **Settings > Plugins**, pick **Gmail**, then **Install plugin** and **Connect**.
- **Or just tell it.** Type your plan and price, like "I pay $80 a month for 1 Gig with Spectrum", or attach a screenshot of your bill.

If you're getting screwed, it writes the email to your internet company asking for the speed you pay for. Read it, change anything you like and send it yourself. Starting fresh in a new chat? Use this:

PROMPT 4 | COPY & PASTE

```
Write an email to [MY INTERNET PROVIDER] asking them to fix my speed or lower my bill.
My plan is [PLAN AND SPEED] for [PRICE] a month, and my speed tests show [YOUR
RESULTS].
```

TIP

Call or chat with them too, and ask for the retention or loyalty team. Ask them to check your line, swap an old router or modem, or match a new customer's price.

Stay Safe: The Rules That Matter

- **Your own network only.** Logging into someone else's router without permission can be illegal. No hotels, Airbnbs, offices, schools or neighbors.
- **The password is on the sticker.** Look for "Admin password", "Router password" or "Device access code". Type it into the router's page yourself, never the chat.
- **Back up first.** ChatGPT saves your router settings before changing anything.
- **Read before you approve.** ChatGPT asks before every change. If something sounds wrong, say no and ask why.
- **Undo is one prompt away.** If something stops working after the changes, open the same chat and send:

PROMPT 5 | COPY & PASTE

```
Something stopped working after your changes. Put my router and my computer back the way they were, using the backup you saved.
```

HEADS UP

Locked out of your router completely? Hold the small reset button on the router for about 10 seconds (some need longer). It goes back to factory settings, with the Wi-Fi name and passwords on its sticker, and you set it up again from scratch.

Common Mistakes and Quick Fixes

If this happens	Try this
You don't see Work	Update the desktop app. Free and Go get limited Work; Plus and Pro get the full thing.
ChatGPT can't reach the router	Make sure you're in the desktop app, running Local, on your home Wi-Fi, not a hotspot or VPN. On a Mac, check **System Settings > Privacy & Security > Local Network**.
You don't see a Local option	Work is running in the cloud, which can't reach your router. Step 3 still works (your plan and the email). For the router part, use your router's app, or my Claude Wi-Fi guide.
The password doesn't work	Use the admin or router password on the sticker, not the Wi-Fi password. Changed it before and forgot? Ask your internet provider or reset the router.
Your router has no login page	You have an app-only router (eero, Nest, Deco, Spectrum, T-Mobile, Starlink). ChatGPT still does the speed fixes on your computer and tells you what to tap in the app.
Xfinity won't let you log in	Turn on the admin tool in the Xfinity app first.
Your speed barely changed	Your Wi-Fi may already be fine and your plan is the limit. Do Step 3.
It can't find your plan	Connect Gmail (Settings > Plugins), or type your plan and price, or attach a screenshot of your bill.
ChatGPT needs your computer password	Type it into your computer's own pop-up, never into the chat.
Something stopped working	Send the undo prompt from the Stay Safe page.

Quick Reference: Faster Wi-Fi

Step	Prompt	What you get
Connect	"Connect to my router and find everything that's slowing my Wi-Fi down."	A speed test and a list of fixes
Fix	"Yes, make those fixes and run the speed test again."	Before and after speeds
The trick	"Now check if I'm actually getting the speed I'm paying for."	Your plan vs your real speed
The email	The [MY INTERNET PROVIDER] prompt	An email asking for the speed you pay for

DO THIS TODAY

Find the sticker on your router and snap a photo of it. Then open the ChatGPT app on your laptop, switch to Work and send the first prompt. You'll have your speed test and your list of fixes in a few minutes.
