ChatGPT Can Find You Discount Codes For Anything You're About To Buy

FIND AND TEST EVERY CODE BEFORE YOU CHECK OUT

Before you check out on anything, paste the link into ChatGPT and let it find every working code, then test them at checkout and hand you the one that saves the most. Two prompts, done right, plus the moves for when no code exists.

The 2 core prompts, written out to actually work
How ChatGPT finds every code for your exact item
How to have it test codes at checkout (and where it gets stuck)
What to do when there's no code, and still save
Stacking, price history, and price-match tricks
A one-page savings cheat sheet

2026 Edition

Before You Buy: The Setup

Most people click Buy and leave money on the table. There is almost always a code, a coupon, or a better price somewhere, you just do not have time to dig for it. That digging is exactly what ChatGPT is good at.

This is two prompts, in the same chat. The first finds the codes, the second tests them at checkout. A quick setup makes both run clean.

2

prompts

\$0

to try it

1

chat, start to finish

STEP 1: Open ChatGPT and choose Work

At the top of ChatGPT, choose Work, and start a fresh chat. Keep everything in this one chat so the codes it finds carry straight into the testing step.

STEP 2: Turn on web search

Switch web search ON (the globe icon under the message box). This is what lets ChatGPT actually go look up current codes instead of guessing from memory. Without it, step one will not work well.

HAVE THE PRODUCT LINK READY

Copy the exact link to the item you want, the specific product page, not just the homepage. The more exact the link, the more relevant the codes ChatGPT finds. Then paste it into the first prompt.

Prompt 1: Find Every Code

Paste your product link into this prompt. It is longer than "find me a coupon" on purpose, the extra detail is what gets you a real list instead of one stale code.

PROMPT 1

```
I'm about to buy this: [paste the product link].  
Use web search to find me every working discount  
code, coupon, and promo for this exact product or  
store right now. For each one, give me: the code,  
what it's supposed to save, where you found it,  
and whether it looks current or possibly expired.  
Also check for first-order discounts, newsletter  
sign-up offers, and free-shipping deals. Put the  
most promising codes at the top.
```

What happens next: ChatGPT searches coupon sites, the brand's own pages, and recent deal posts, then hands you a ranked list of codes with where each came from. You now have every candidate in one place, which already beats hunting through ten sketchy coupon sites yourself.

WHY THE NEXT STEP MATTERS

Coupon sites are full of dead and fake codes, it is how they get clicks. So this list is a set of candidates, not guarantees. That is the whole reason for the second prompt: instead of you pasting each one at checkout, ChatGPT tests them for you.

Prompt 2: Test Them At Checkout

Here is the trick from the video. ChatGPT opens its own browser and runs each code through checkout, then tells you which one actually works and saves the most. This prompt tells it to stop before buying, so nothing gets purchased without you.

PROMPT 2

```
Now open your browser, go to the checkout page  
for this item with it in my cart, and test each  
of those codes one at a time. Tell me exactly  
which code works and which saves the most. Apply  
each code, note the new total, then move to the  
next. Do NOT complete the purchase, stop at the  
discount so I can check out myself.
```

What happens next: ChatGPT opens a browser, goes to your cart, and starts typing each code into the promo box, reading the new total each time. When it is done, it tells you the winning code and what it saved. It stops before payment, so you always make the final click.

SET IT UP SO IT WORKS

Before you run this, be logged into the store in that browser and have the item sitting in your cart. That way ChatGPT lands on a real checkout page instead of getting stuck at a sign-in. If the browser hits a login or a "confirm you're human" check, do that step yourself, then tell it to keep going.

If it is not working right

No browser opened. Your ChatGPT may need its browsing ability turned on. Say "use your browser to do this," and if nothing happens, switch on browsing / agent mode for your plan.

It got stuck at the cart or a login. Log in yourself in that window, make sure the item is in the cart, then tell it to continue from the checkout page.

The site blocked repeated tries. Some stores limit how fast codes can be entered. Say "try them one at a time and wait a few seconds between each."

HEADS UP

It should never complete a purchase on its own, the prompt tells it to stop at the discount. Always eyeball the final total and click Buy yourself. You stay in control of the actual payment.

When There's No Code, Still Save

Sometimes nothing works. That does not mean full price. These are the extra prompts to pull out when the codes come up empty, same chat, any time.

Unlock a first-timer discount

THE NEW-CUSTOMER PLAY

This store has no public codes. What first-order or newsletter sign-up discounts does it offer, and exactly how do I get one before I check out?

Trigger an abandoned-cart offer

Lots of stores email you a code if you add something to your cart and leave it for a day. Ask ChatGPT if this store is known to do it, and whether it is worth the wait.

THE WAIT-IT-OUT PLAY

Is this store known to send a discount if I leave an item in my cart for a day? If so, walk me through setting that up.

Check the price history before you buy

SHOULD I BUY NOW OR WAIT

Is this a good price for this item, or has it been cheaper recently? Should I wait for a known sale, and if so, when's the next likely one?

Find it cheaper somewhere else

PRICE-MATCH HUNT

Is this exact item sold cheaper at another legit retailer right now? And does this store price-match? If so, how do I request it?

Stack Discounts Like A Pro

The biggest savings come from combining things, not finding one magic code. A few moves that add up fast.

Ask what stacks

Some savings combine: a code, plus free shipping, plus cashback, plus a card offer. Have ChatGPT sort out which ones can be used together on this order.

STACK CHECK

Of everything we found (codes, free shipping, first-order offer, cashback), which can I combine on this order, and in what order should I apply them to save the most?

Add cashback on top

Cashback sites and browser extensions pay you back a percentage after you buy, on top of any code. Ask ChatGPT which cashback option gives the most for this specific store before you check out.

Time it right

For anything not urgent, the calendar is your friend. Big sale events, end-of-season markdowns, and new-model release dates all move prices. Ask ChatGPT when this type of item is usually cheapest.

TIP

Screenshots help. If ChatGPT cannot reach a page or a code box looks unusual, paste a screenshot of your cart and it can tell you exactly where to put the code.

THE HABIT THAT SAVES THE MOST

Make it a rule: never click Buy without running Prompt 1 first. It takes 60 seconds, and over a year of online orders those 10 to 20 percent savings add up to real money.

The One-Page Cheat Sheet

The whole system, in order. Screenshot this before your next order.

1. FIND EVERY CODE

I'm about to buy this: [product link]. Use web search to find every working discount code, coupon, and promo for this exact product or store right now, with the code, the saving, the source, and whether it looks current. Include first-order and free-shipping offers. Best ones first.

2. TEST THEM AT CHECKOUT

Now open your browser, go to my cart's checkout, and test each code one at a time. Tell me which works and saves the most. Do NOT complete the purchase, stop at the discount. (Be logged in with the item in your cart first.)

If step 2 gets stuck

Log into the store yourself and make sure the item is in your cart. Clear any "confirm you're human" check, then say continue. If the browser never opens, turn on browsing / agent mode. If the site blocks fast tries, tell it to go one at a time and wait.

When no code works

Ask for a first-order or newsletter discount, try the abandoned-cart wait, check the price history, hunt for a cheaper retailer or price-match, and stack a code with free shipping and cashback.

YOUR ACTION PLAN

1. Open ChatGPT (Work, web search on). 2. Paste your product link and run Prompt 1. 3. Log in, add the item to your cart, run Prompt 2. 4. If nothing works, try the no-code plays. 5. Confirm the total and check out yourself.
